## Description

Tangram is an android game. It's a dissection puzzle game where the objective of the game is to put together the pieces to form a given shape. Currently the game features/showcases 6 different modes with a few levels in each mode, we plan to extend the number of levels in each mode. We will also be making the game more social friendly by adding interaction between users with the help of leaderboards, bonuses etc. We will also integrate facebook friends so a user can compete with their friends and invite others to the game.

We are going to implement additional features for the existing application.

Here is the list of features we will be working on:

## Profile of Users

The end users are mostly children in their early teens and casual gamers who are looking for a challenge.

## Usage Models and Diagrams
